

## **Listing of Claims**

Claims 1-29 (cancelled)

30. (New) An on-line interactive computer price discovery system comprising:

- (A) a database programmed to store over-the-counter securities data, the securities data including a security identity field, a price field, a price source field and a price source date field;
- (B) a database programmed to store price user data and price user client data;
- (C) a processor programmed to receive price submission data from said price users and to receive election data, said election data directing the storage system to share the data with said price user client data;
- (D) a database programmed to store price source data, said price source data including source identity information, price date information, and price user identifiers;
- (E) a database programmed to store price user data, said price user data including price user identifier information;
- (F) a processor programmed to receive price submission data, said price submission data comprising security data and price source data, and to store said price submission data in said database fields, said price submission data processor programmed to receive real-time and time-delayed data feeds and batch feeds from external sources and entries from price users;
- (G) a processor programmed to receive securities price requests, said price requests comprising securities identifier information, and to retrieve data from said databases; and
- (H) a processor programmed to display and update in real-time and simultaneously, in response to a user request, the latest price information from each of said price source identifiers permitting access to said price information.
